

Cloud Failover Appliance

Cloud Failover Appliance (CFA) is an enterprise-grade disaster recovery solution that recovers systems and applications in less than 15 minutes - without all the hardware and complexity traditionally needed to achieve this failover benchmark.

With CFA you can:

- Increase uptime
- Reduce hardware costs
- Protect your business from data theft, application failure, and site disaster

CFA delivers the peace of mind that comes with knowing your business isn't just safe and secure, but always available.

What makes CFA different?

CFA takes the best features found in multi-million dollar enterprise solutions and makes them affordable for any company. Combining the power of the cloud with intelligent software is how CFA erases expensive hardware and complex steps from the DR equation to deliver secure failover in less than 15 minutes.

OLD WAY

- Bandwidth
- People
- Software

Up to 2.5X Hardware Cost

NEW WAY

PUSH BUTTON FAILOVER

How it Works

CFA is a thin cloud-edge device that caches and stores your most critical data on-site and archives the rest in the cloud – along with a copy of your on-site data. Self-service failover functionality is activated with a push button and the intelligent software and the cloud does the rest.

Bring your business back to life in minutes with less hardware, complexity and training costs. CFA is delivered as a virtual or physical appliance and includes all of the enterprise bells and whistles you'd expect: WAN acceleration, data deduplication, and military-grade encryption.

INFRA SCALE DISASTER RECOVERY

Failover from Anywhere

Discover A New Approach to Failover

SOLVING COMPLEX RECOVERY SCENARIOS

Push Button Failover From Anywhere

Think you can't have local and cloud recovery in one solution? With CFA, you can have both. You can failover a single virtual machine (VM), applications, servers or a whole network locally or in the cloud in less than 15 minutes at no extra charge. CFA cracks the disaster recovery cost barrier and provides easy and fast recovery of systems and data.

REDUCE HARDWARE COSTS

Push Button Scalability

When others say get more hardware, CFA says get more cloud. CFA understands not all data needs expensive local storage and intelligently spills data into the cloud based on rules you set, so you don't have to scale DR with additional hardware.

- Maximize every storage hardware dollar spent
- Lower storage hardware provisioning costs
- Install CFA so you never have to buy another appliance

PEACE OF MIND FOR LESS

Safe and Secure Failover

Protect from Sony or Snowden like attacks without additional hardware, eliminating the vulnerability lost or stolen data creates for your business.

- **Triple Layer Encryption and the Key:**
Others either don't protect or only quote bit encryption numbers, but CFA has unique UltraSafe technology that uses private key encryption along with double blind encryption so only you can view or decrypt your data in the cloud. No matter what cloud your data is in, CFA prevents others (vendor, government, hackers) from accessing your data.
- **Mobile Data Security:**
Control what confidential data users can transfer, wipe data from remote devices, and backup a wide range of mobile and laptop devices to prevent data loss and theft.

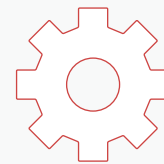

Transform Your Businesses Without Disrupting It

Complimenting 15 minute failover is CFA's ability to fit into any environment and meet any deployment requirement.

WICKEDLY FAST TO MEET RPO/RTO OBJECTIVES

Worried about cloud performance? CFA comes with unique WAN acceleration technology that moves data to and from the cloud so you can boot up to 200 VMs concurrently delivering wickedly fast cloud failover for increased uptime, fast recovery and reduced network costs.

YOURS, OURS OR ANY MANAGEMENT SYSTEM

CFA integrates easily with a range of remote monitoring and management (RMM) systems meaning fewer tools. CFA displays and manages information from all your mobile devices, desktops, and laptops, physical and virtual servers in a single web-based dashboard.

PROTECT EVERYTHING

Tired of managing disparate DR, backup, and archive solutions? We get it which is why CFA provides full recovery, backup, and archiving for any device, server, and OS including:

- Physical and virtual servers (with agent-less backup and DR)
- VMware and Hyper-V
- Desktops, laptops, and mobile devices
- 100+ OS types and versions (Windows, Mac, Linux, etc)

WORKS IN ANY CLOUD

Our cloud, your cloud or any cloud, with CFA there is freedom of cloud choice – no vendor lock in of your data. Seamlessly integrate with your existing backup and cloud investments and improve your time to deploy from days to minutes. Our cloud provides data sovereignty with 12 data centers worldwide.

Eliminating The Big Worries: Availability and Costs

As an enterprise-grade solution, CFA delivers secure failover every business can afford – all in one solution without all the hardware and complexity costs.

With CFA's unique capabilities, you no longer have to fear whether you can keep operating your business when servers fail or a disaster strikes. You receive cloud-scale affordability and enterprise-grade uptime far beyond anything affordable with an on-premise approach.

Infrascale is a provider of the most powerful disaster recovery solution in the world. Founded in 2006, the company aims to give every company the ability to recover from a disaster - quickly, easily and affordably. Combining intelligent software with the power of the cloud is how Infrascale cracks the disaster recovery cost barrier without complex, expensive hardware enabling any company to restore operations in less than 15 minutes with a push of a button. Infrascale equips businesses with the confidence to handle the unexpected by providing less downtime, greater security, and always-on availability.

We are one of London and the UK's leading independent suppliers of services to businesses, managed communications and IT. Headquartered in London, with a nationwide customer base, we help companies to rationalise, improve upon and realise enhanced business benefits from IT and technology through the provision of managed services and outsourced IT management.
